CONNECT EVERYONE!

RACECONTROL

The ability to talk to all drivers, to completely monitor all cars with the live cameras and telemetry data and to be able to send out flag signals in the future. The live cameras can be viewed again directly via the cloud replay and shared as an AI-generated social media post for example.

BROADCASTING COMPANYS

Up to 4 live onboard cameras, which are fully remote controllable (mini PTZ cameras possible), intercom integration for live interviews and driver radio clips, telemetry data connection for live animated dashboards etc. The signals can be delivered by cloud, Mediornet, SMPTE 2110 or NDI.

TEAMS & ENGINEERS

High quality intercom connection with the driver, monitoring of the vehicles and remote setup adjustments if necessary. Permanent view of all 4 onboard cameras and any other signals made available in the cloud (world feed, timing etc.), individual multiviewers and e.g. instant replay if requested.

TIMEKEEPER

The possibility to support timekeeping with GPS-based data, to track vehicles precisely on the track and, for example, to use the data for a track limit detection system.

SPECTATORS

A customised app can be fed with video signals via the cloud functions, allowing viewers to create their own multiviewer with their preferred camera angles. In addition, the functions can also be used to place more individual adverts etc.
